Authority for Public Services Regulation

Public Consultation on New standards and Regulations for Electricity Metering Systems

7 December 2020

Introduction

The Authority had been working with the Ministry of Commerce, Industry and Investment Promotion to review and update the existing regulatory framework for electricity meters. The work includes reviewing and updating Oman Electrical Standard 22 (D, E & F), the Metering and Data Exchange Code (MDEC), the Metering Regulation and develop new standard for pre-payment metering system.

Public Consultation

The Authority would like to invite interested parties to review and provide their comments and observations on the following:

1. A technical Standard for Metering Systems. This standard establishes the technical requirements for metering equipment which shall be installed at all connections between networks of all licensed distribution companies and all network users;
2. A technical Standard for Prepayment Meters which is the requirements for prepayment metering equipment which may be installed at LV customer connections between networks of all licensed distribution companies and all network users;
3. A technical regulation for Installation and Maintenance of Metering Systems;

The Authority is inviting responses to the consultation before the end of the consultation period which is 7th January 2021. The comments should be provided by filling the table
